### GeoComm mapping to be conducted in Fargo & Cass County

FARGO, N.D. (July 24, 2014) – The State of North Dakota Department of Emergency Services is currently working with Geo-Comm., Inc. (GeoComm) to create a Statewide Seamless Base Map that will be used for 9-1-1 purposes. The GeoComm fieldwork crew will be in the Fargo and Cass County area **August 4 – 22, 2014**, and will be visiting some residences and businesses to verify addresses.

In some cases GeoComm will only need to verify the location of the residential structure and will not need to speak to the resident. In these cases, residents may see a GeoComm vehicle come up their driveway, then turn around and leave. If a house number is not posted on the structure, a GeoComm field technician may approach the house to verify the address and landline telephone information. This information will be used to verify and update the address information on the map.

If the GeoComm Field Technician is unable to connect with a resident, a paper survey with contact information will be left behind. We ask that residents assist in the successful completion of this project by calling a North Dakota Project Team member at 888-436-2666 or visiting the online survey site at <http://nd-des.geo-comm.com> to provide the information requested.

Information provided to GeoComm will be considered confidential and its distribution restricted to only those parties involved in the Statewide Seamless Base Map project. Anyone with questions or concerns can contact the Cass County 911 Coordinator Tara Morris at 701-241-5829 or North Dakota DES Public Information Specialist Cecily Fong at 701-328-8154.
